DETAILED ACTION

Allowable Subject Matter

Prosecution on the merits of this application is reopened on claims 1, 3-8, 10-18, 21-29, 43, 45, 48-49 and 51 considered unpatentable for the reasons indicated below.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 3-8, 10-18, 21-29, 43, 45, 48-49 and 51 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kessler 3,276,640 and De Polo 6,257,463.

Application/Control Number: 10/712,105

Art Unit: 3754

Kessler (3,276,640) shows a hollow cap 11 comprising: a radially surrounding sidewall; a top that radially extends from a substantially central cap opening 12 to an end of the top at the sidewall of the cap; a post 20 adapted for sealingly engaging a receiver opening 8 of a receiver piece; a support structure 14 supporting the post 20 in a longitudinally spaced position from the cap opening; and an internal cap ring (the lowermost inwardly directed flange adjacent reference number 7 in Figure 2) formed on an inner surface of the sidewall of the cap, where an outline of the support structure forms a passageway between the cap opening and a hollow space within the cap, the cap is adapted to slidably engage a receiver piece with a push-pull-motion, and the support structure contacts an inner surface of the top. (See column 1 lines 64-72 through column 2 lines 1-21).

De Polo (6,257,463) shows a hollow cap 25 comprising: a radially surrounding sidewall 26; a top 28 that radially extends from a substantially central cap opening (unlabeled, adjacent reference number 27 in Figure 6) to an end of the top at the sidewall of the cap; a post 24 adapted for sealingly engaging a receiver opening 23 of a receiver piece 11; a support structure 24a supporting the post 24 in a longitudinally spaced position from the cap opening; and an internal cap ring 33 formed on an inner surface of the sidewall 26 of the cap 25, where an outline of the support structure forms a passageway between the cap opening and a hollow space within the cap, the cap is adapted to slidably engage a receiver piece with a push-pull-motion, and the support structure contacts an inner surface of the top.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to PHILIPPE S. DERAKSHANI whose telephone number is 571-272-4925. The examiner can normally be reached on 8 hour days.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kevin P. Shaver can be reached on (571) 272-4720. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
